

## More Airflow. Less Stress.

The ZQuiet Pro-Plus is a patient-friendly, dorsal style appliance that has evolved into one of the most popular therapy choices in dental sleep medicine. The two-piece construction provides lateral jaw movement enabling the patient to open and close normally. Sturdy fins on each side intersect with adjustable stops to maintain the lower jaw in a specific anterior position that optimally opens the airway and provides unobstructed breathing.

The ZQuiet Pro-Plus is FDA Cleared for the treatment of snoring and mild-to-moderate Obstructive Sleep Apnea (OSA) in adult patients.

### ZQuiet Pro-Plus The Right Appliance for Your Patients.

**Designed to Maximize Patient Comfort and Compliance:** The low profile design of the device is minimally invasive allowing for maximum intraoral space. There are no bulky hinges, posts, or mechanical hardware to interfere with the mouth opening or impede reflexive travel of the tongue. This provides greater comfort resulting in higher patient compliance.

**Designed to Maximize Treatment Results:** The micro-adjustment screws built into the angled stops on the buccal of the maxillary appliance provide the capacity to advance the mandible in 0.10 mm increments. Placement of the screw does not compromise tongue posture or impinge on the oral cavity.

The occlusal aspects on the mandibular orthotic are fashioned to increase the vertical inter-incisal dimension to further assist in dilating the upper airway. The clinician can specify the vertical dimension to optimize performance for each patient.

### ZQuiet Reaches Millions... Now You Can Too!

ZQuiet is the leading consumer brand in snoring, and has introduced oral appliance therapy to hundreds of thousands of patients. We are inviting select dentists to be part of the *ZQuiet Dental Network* to receive patients who need professional products and services to treat their sleep disordered breathing.
